

e-cycling

E-cycling is the practice of reusing, or distributing for reuse, electronic equipment and components rather than discarding them at the end of their life cycle. According to Gartner Group research, over four million computers will be replaced, worldwide,

E-cycling is the practice of reusing, or distributing for reuse, electronic equipment and components rather than discarding them at the end of their life cycle. According to Gartner Group research, over four million computers will be replaced, worldwide, between 2004 and 2006.

When it comes to data center job interviews, rattling off common DevOps and automation terms won't get you far - you must establish your knowledge of IT infrastructure scalability and resiliency, as well as culture and business to really impress. Download this COMPLIMENTARY Data Center Terminology guide to learn how to ace your next interview.

Discarded electronics and electronic components (e-waste) are creating a serious problem because of toxic elements involved in their manufacture. In the vast majority of cases, discarded computers and other electronic devices, such as cell phones, are functional and could be passed on to another individual or organization. Often, even non-functioning devices can be refurbished and resold or donated. Organizations such as StRUT (Students Recycling Used Technology), the National Cristina Foundation, and the Resource Area for Teachers (RAFT) collect and refurbish donated computer equipment for redistribution to schools and charities around the world.

A number of initiatives, such as eBay's Rethink project, have arisen to promote e-cycling. Dell, IBM, Intel, and Hewlett-Packard are among the members of Rethink.

Some Little Good News about Electronic Waste

Electronic Waste. We take pride in responsibly recycling 99% of all electronics we process in our facilities. Nilo Tech guarantees that your old electronics never reach a landfill, either locally or overseas.
